Cooperation with social partners

Continuing our cooperation with social partners, we received guests from Biržai nursery-kindergarten "Genys". The entire staff of the Biržai nursery-kindergarten "Genys" arrived at Rokiškis nursery-kindergarten "Varpelis". The purpose of the visit is to share good experience in creating indoor and outdoor spaces adapted to modern innovative education and to discuss with specialists and managers about more efficient organization and management of the institution's activities. After viewing the groups, the guests participated in three educational activities: Ebru art, clay therapy and physical activity.

After that, we showed the outdoor spaces and presented the possibilities of their use: Smalsutė garden, STEAM gazebo, Game shed, creative space and education hut. We demonstrated the "Tool-kit for Teachers to Teach Outdoor Learning Toolkit" created during the Erasmus+ project "Pop-up learning".

We received many kind words and wishes from the guests, which inspired us even more for the new academic year.

Erasmus+

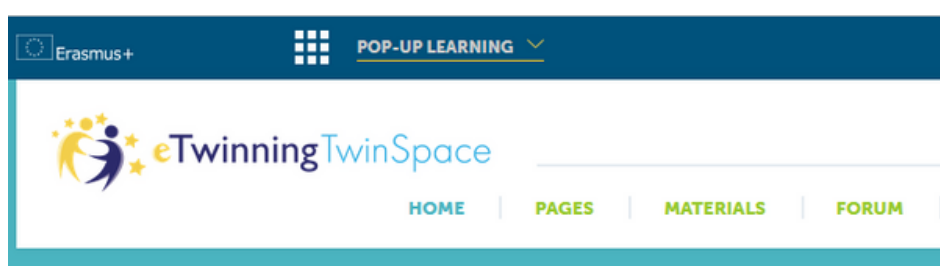

Meeting moments

eTwinning Twin Space

Sudden, unplanned transition to distance learning in 2020 disrupted the established educational process. Involving students in learning and adapting curricula is a challenge. When children return to school, they will need a lot of time to adapt and learn and consolidate the lost knowledge. Learning by playing outdoors, which helps to arouse curiosity, can help to solve educational gaps more quickly.

In eTwinningTwinSpace there are the examples how to organize outdoor learning. Teachers describe simple activities.

Pop-up learning

Staigus, neplanuotas perėjimas į nuotolinį mokymąsi 2020 m. sutrikdė nusistovėjusį ugdymo procesą. Įtraukti mokinius į mokymąsi ir pritaikyti ugdymo programas yra iššūkis. Kai vaikai grįš į mokyklą, jiems reikės daug laiko adaptacijai ir prarastų žinių išmokimui ir įtvirtinimui. Mokymasis lauke žaidžiant, kuris padeda sužadinti smalsumą, gali padėti greičiau išspręsti susidariusias ugdymo(si) spragas. Dešimtmečiais atliekami moksliniai tyrimai ir teorijos byloja, kad žaidimas yra pagrindinis būdas, kuriuo vaikai supranta savo pasaulį.
